

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

THIS Manual is submitted to the public as a short, but essentially practical treatise on the interesting subject of Bibliography, a subject that can never be sufficiently understood, since it can never be sufficiently learned. For the many inaccuracies which must therefore necessarily arise in a first edition of a Manual of this nature, the Author craves an indulgence, which, if it be granted, will ensure a speedy reformation.

It will be seen that the Manual is divided into two sections, in the first of which the Theoretical side of the subject is dealt with. In this it is to be hoped that the reader will derive considerable assistance on points of general interest relating to Bibliography. In the second section a Classification of Rare and Standard Works is presented, and these are arranged under particular subjects with reference to the Author's name, so that if the chapters forming the first section are carefully read, there will be but little difficulty in understanding those relating to the second.

The Author will at any time be glad to receive corrections or suggestions tending to improve either the system or the accuracy of the work, as indeed any other information which may be calculated to extend its scope of efficiency.

THE LIBRARY MANUAL.

SECTION I.—ON BOOKS GENERALLY.

CHAPTER I.

INTRODUCTORY.

The Rarity of Books, and what causes it—The relative Sizes of Books.

MONTAIGNE in his "Essay on Books" remarked, "that he never read except as a diversion, nor did he study for any other reason than that he might know himself, and how to live and die well." As both reading and studying with such an object presuppose an assortment of books judiciously selected, it is obvious that the author himself, were he living, would attach the highest importance to such a careful choice as might ensure the happiness of the reader. Since Montaigne's days, however, a change has come over all moral opinion, and it is no longer considered that a man's happiness, life, and death, depend upon the books he reads; nor is it intended to assert such a doctrine now. That a bad book may, under certain circumstances, have an evil tendency, cannot be doubted; but when the mind is formed, no fear of such a result can be entertained. Montaigne intended to assert in homely language what is without doubt perfectly true, that a choice of good, well written works, whatever subject they may embrace, is beneficial to him who studies the contents; and in this, reason and practical experience must agree.

The reader will therefore please observe, in the first instance, that all we profess to do in this and the following chapters is to give a simple dissertation on books generally, so as to enable anyone having but little practical experience in their collection to know at a glance the size, shape, and description of any particular specimen he may happen to come across. We shall explain the meaning of technical terms, and give recipes for the preservation of works, together with useful information on the subject generally.

It is then intended, in the second series of chapters, to point out under distinguishing heads the various works specially noticeable, with their values. This plan would seem to be based on a system not hitherto adopted by any author that we are aware of. There are, of course, a great number of treatises on the subject, but most of them would appear to consist of histories of the art of book collecting rather than to be what they should be, practical manuals for the use of students. Old Isaac Walton, in his "Angler," discourses most learnedly upon Fishes and Fishing, and no one, after a perusal of the work, could say that he did not know more about the science than when he began; but it is very doubtful whether, for all that, the guileless reader will have picked up, beyond here and there a few scraps, any really good practical information, such as will serve him some of these days, when, rod in hand, he betakes himself to the Isis or the Dove. So also with the works in question, where a great deal may be learned about collectors of books, and the rarity of some extraordinary specimen which no one is likely to see, but very little about the practical collection and value of good sound books, such as will be met with every day upon the stalls of the booksellers.

It is to supply this want that this work has been written, and although we shall *in transitu* describe the appearance of several rare and curious books not to be met with possibly outside the walls of the British Museum, yet this will be exceptional, and for the most part the information afforded will be of a nature calculated to qualify the collector in forming for himself a suitable library upon most branches of learning, and, what is very important, to enable him to have some fair idea of their value.

To commence at once with the business before us, and leaving all superfluous comment on one side, it is to be premised that the reader knows a book when he sees one, although he may never have heard of it before, or have an idea of its value. He may never see a copy of the same work again, or he may meet with it almost immediately upon another bookstall. The book may be difficult to obtain, or it may not, and it is just this difficulty that forms the basis of all calculations for determining the scarcity of any particular work. The rarity and consequent value of a book depend chiefly upon the number of copies originally printed, and upon the way in which it was received by the public; for instance, a "suppressed" work, that is, a work published and then prohibited by the authorities, is more likely than not to have an artificial value. So, also, are books printed on vellum, there being but few of them; and the same is the case with books "privately printed" by some person with a taste for literature, but with no literary ambition, because in this instance the circulation is limited. In fact, if from any cause whatever, a work of merit, or frequently of none at all, be published, and the circulation then becomes limited, the book in question is styled "scarce," or "very scarce," or "rare," or some other qualifying adjective is employed to mark the distinction. To discover what book is scarce and what merely uncommon, is a work of experience, and no rules can be given, as the

question of scarcity does not depend upon any settled rule, but is referrible to the circumstances of each particular case only, and in this respect every book must stand by itself. As these chapters progress, many hundreds of scarce works will be referred to, and an approximate value in each case appended, so that the reader can, if he thinks fit, go through any tolerable library in the certain hope of finding *there* some of the books referred to here.

Before anything further can be attempted, it is absolutely necessary that the collector should obtain a clear notion of the sizes of the volumes that he may come across, together with their technical appellations. This, unfortunately, since the introduction of machinery into the trade of paper making, has become a matter of difficulty. The old-fashioned moulds had fixed sizes, but nowadays the makers would seem to work by measurement, so that any arbitrary size the maker chooses to fix upon for his "whole sheet" will regulate the size of his quartos and octavos also. It may be taken for granted, however, that the true size of a volume is to be determined by the number of leaves into which a whole sheet is folded. To discover this, take any book you please, open it, and you will notice at the foot of the page a "signature," which consists of nothing but a figure or letter, the figure 8 or the letter B, for example. Start, say, with the figure 8, and count the *leaves* (not pages) until you come to another small figure, 9. If a further test is required, find the binder's thread, which runs through the middle of every sheet, and the number of leaves from one thread to the next will give the same result. Having counted the number of leaves, observe that if the book is a "folio" it will consist of one leaf with a signature, and the following one without; the next leaf after that will have the following signature, and so on through the book. Thus :

A Folio consists of 2 leaves (that is, 4 pages) between signature and signature.			
Quarto,	written 4to	4 leaves.	Sixteen-mo, written 16mo
Octavo,	8vo	8 "	16 leaves.
Duodecimo,	" 12mo	12 "	32mo

There are some other sizes, such as "seventy-two-mo," "one hundred and twenty-eight-mo," and the like, but it will only be necessary to state that in these cases, as in the others, the sizes are distinguished by the names, thus : "thirty-six-mo" consist of 36 leaves between signature and signature, and "twenty-mo" of 20 leaves, and so on.

As before observed, each maker of paper may manufacture a size of his own, and the measurement of the different foldings will therefore differ in particular cases. As a rule, however, and by the custom of the trade, the following measurements in inches will accurately describe the particular class of paper referred to :

Foolscap	17	by	13 <i>1</i> ₂		Royal	24	by	19
Post	18 <i>1</i> ₂	"	15 <i>1</i> ₂		Imperial	30	"	22
Large Post	20 <i>1</i> ₂	"	16 <i>1</i> ₂		Elephant	28	"	23
Crown	20	"	30		Atlas	34	"	26
Demy	20	"	16 <i>1</i> ₂					

From the name given to these papers has sprung up a system of classifica-

tion, very confusing in the first instance, but easy enough to comprehend after a time. Thus, Octavo books, that is to say, books consisting of eight leaves between signature and signature, are divided into Foolscap 8vos, Post 8vos, Crown 8vos, Demy 8vos, Royal and Imperial 8vos. If, therefore, the reader will take a sheet of paper measuring 24in. by 19in. he will have a sheet of Royal. Let him fold it once across, then fold it again and he has a Royal 4to, fold again and he will have a Royal 8vo. A sheet of Post may be treated in the same way, the result being, of course, Post 8vo instead of Royal 8vo the adjectives Royal, Post, Imperial, and the rest, referring to the original size of the paper from which the book is made.

We had almost omitted to state that in the case of some very old books the system of discovering the size by means of the signatures is not to be depended upon, there frequently being no signatures to be found. In this event, hold a page of the volume against the light; then if the watermarks are in the middle of the page, the book is a folio; if at the bottom and cut in half by the binding, it is a 4to; if at the very top and also cut in half, it is an 8vo, and the 12mo and 16mo have the watermark on the edge.

For a few familiar examples, observe that the *Graphic* and *Illustrated London News* are folio, *Punch* and the other comic papers are 4to, a sheet of music is a Royal 4to, while *Cornhill*, the *Leisure Hour*, *Good Words*, and the *Contemporary Review* are all examples of different 8vos.

CHAPTER II.

OLD PRINTERS AND OLD PRESSES.

Block Books—Prayer Books, or “Hours”—The Estienne, Elzevir, and Aldine Presses.

IT is a mistake to suppose that the art of printing was established in Europe no earlier than the time of Guttenburg and Caxton. That such is the usually recognised opinion we are aware; but the fact is that as early as the commencement of the 15th century printing by means of “blocks” was extensively carried on in Holland and Germany. The printer engraved upon wood each page of his work, and was then enabled to take many copies without that loss of time which characterised old manuscript productions. There are, indeed, accounts of block books printed at a much earlier date than the era suggested, but the matter is so doubtful that to enter upon a discussion of it would be unsuited to this work. Suffice it to say that these early “block books” are so exceedingly scarce, and even when found command such high prices, that it will hardly be worth while to spend any time in describing them. Several specimens may be found in the British Museum, and many, no doubt, in the public libraries of Europe, but they are seldom to be met with casually, as their very appearance would be sufficient to ensure their immediate impounding. The invention of printing, in reality, dates from the employment of moveable type such as is now generally used, and the palm of the discovery is usually accorded to Guttenburg, who established presses at Strasburg and Mayence between the years 1436-67. He is described as having printed (with characters of metal on parchment) as many as 300 sheets per day. The books of Guttenburg, as also those of his successors, Füst and Schaffher, are so scarce that their current value may be conceived when it is stated that a copy of one of them was sold in Venice in 1460 for 18 ducats, or about £10, equal to about £200 modern English money, and this at a time when the presses were in full working order. In 1462 Füst came to Paris with a supply of Bibles, which he was able to sell for 50 crowns each instead of 400 or 500 crowns, which was the average price of MS. books of the same kind.

No sooner had Füst set the example than presses were established all over

the country, principally in Lyons, where the famous printer William Le Roy established himself in 1473. His first work was a little quarto of 162 pages, printed in Gothic type, entitled the "Compendium of Lotharius;" other books also bear his name; they are very scarce, but are occasionally to be met with. Another famous printer of the age was L'Allemand of Mayence, who printed a well known book in folio, entitled "Missal à l'usage de l'Eglise de Lyon," and many other works. There was also a press established at Abbeville in 1486 by Jehan Dupré, who printed St. Augustine's "Cité de Dieu." In fact, about this time so great was the rage for the new art, that presses were started all over Europe, and there was hardly a town of any pretensions to size which could not boast at least one press with its attendant printers. During the last ten or fifteen years of the 15th century there were issued from the presses of the various Parisian printers a number of prayer books, or "Hours," as they are termed. The first printer of the "Hours" was Pigouchet, and he was followed immediately by Le Vostre, De Brie, Verard, Olivier, and others, whose names may occasionally be seen at the foot of the title page of many a rare and curious work. Specimens of "Hour Books" of De Brie may be seen at the British Museum (C. 46, d, and also 469, a 6); they are well worth looking at, if only for the purpose of obtaining a general idea of the style of printing adopted in these early days. The collector who would purchase a copy of an "Hour Book" must have a capacious pocket.

A much more famous printer, because more generally known than any of the above, was Henri Estienne, whose descendants owned a press at Paris for many years after the death of its founder. Many of the works of the Estienne press are extant, and several will be referred to hereafter. They consist principally of classics, bibles, lexicons, and other large works; Horace and Virgil were favourite books, and no less than fourteen editions of Terence were from time to time issued from the same press. The reader should preserve works printed by any of the Estiennes, as they are valuable. The same remarks apply to the "Elzevirs," so called from the family name of the printer. Louis Elzevir established himself as a book-binder and bookseller in Leyden about the year 1592, and from that date to 1712 the presses were in a state of more or less activity. These publications can easily be recognised, as they bear for the most part their distinguishing feature at the foot of the title page. Most of them have the words, "Apud Elzeverios," or "Ex officina Elsevieriana," while some have typographical marks, chiefly consisting of :

1. An Eagle, holding in its claws a sheaf of seven arrows, with the inscription, "Concordia res parvae crescent."
2. Minerva with an olive branch, and the motto, "Ne extra oleas."
3. The branch of a tree surrounded by a vine branch bearing clusters of fruit, and below it a man standing, with the motto, "Non solus."

It is to be noticed, that when the Elzevirs did not wish to put their name to their works, they generally marked them with a sphere; but of course the

mere fact that a work printed in the 17th century bears this mark is no proof that it is theirs. The total number of works of all kinds which bear the name of the Elzevirs is stated to be 1213, of which 968 are in Latin, and not one in English.

One would naturally think that the issue of so many works from one press would have flooded the markets and rendered them common. Such, however, is not the case; the Elzevir editions are to this day diligently sought after by every collector of books, and to the casual reader the elegance of design, neatness and clearness of type, and beauty of paper must be of no little assistance. In point of fact, many of the Elzevir editions are better printed, and are altogether more carefully put together than the vast majority of English books of the present day. Another famous press was that established by Aldus Manutius, at Venice, in 1490, commonly called the "Aldine" Press, from the christian name of the founder. These works, recommended by their intrinsic value, as well as by their handsome exterior, have been highly prized by the learned and by book collectors. Many of the works are the first editions (*Editiones principes*) of Greek and Latin classics; others contain corrected texts of modern classics, such as Petrarch, Dante, and Boccaccio, and all of them are distinguished by extreme neatness of type and style. About 900 works were issued from this press, and the distinguishing mark is an anchor entwined by a dolphin, generally with the motto, "Sudavit et alsit." This will generally be found on the title page of each, and but few mistakes can arise after the mark is once seen. It may be taken as a general rule that the earlier editions of the Aldines are the most valuable; they were scarce even in the year 1502, so much so, in fact, that the printers of Lyons and Florence began in that year to forge them by the hundred at a time. A great quantity of both "Aldines" and "Elzevirs" now in the market are undoubtedly forged, and their detection is frequently a matter of extreme difficulty. A catalogue of all the authentic "Aldine" editions will be found in the supplement to the first volume of "Ebert's Bibliographical Dictionary." Another famous printer was Sebastian Gryphius, of Lyons, who flourished in the years 1528-56, and whose productions are highly prized, as are also those of Etienne Dolet, another Lyonese printer. It would be impossible, however, even if it were politic, to give anything like a complete list of even famous printers of old days. The works from the Aldine and Elzevir presses appear to be the most sought after, and there is, moreover, a tolerable chance of a collector obtaining possession of specimens either casually or for a reasonable sum, which is not the case with others. Of English productions, those of Caxton, of course, stand foremost, but as a genuine copy of that printer's work is valued at from £100 to £500, and even more, it is hardly worth while going into any minute description of them. Should the reader be curious to see the printer's style, he will find some excellent fac-similes in "Humphreys' History of the Art of Printing." After Caxton followed Richard Pynson, who lived in the reign of Henry VII.; then follow Wynkyn de Worde, Julian Notary, William

Fawkes, Treverius, Nicholson, Redman, Godfrey, Richard Grafton, and many others, whose works principally appear in black letter, a kind of type to be explained hereafter.

If any very minute and careful information is sought respecting Old Printers and Old Presses, the reader cannot do better than refer to "Humphreys on the Art of Printing," already referred to, where he will find everything necessary to be learned, together with a large number of plates descriptive of various kinds of type and style.

CHAPTER III.

ANCIENT CENTRES OF PRINTING—NUMERALS.

Latin Equivalents—Roman Notation.

WHENEVER an old book is taken up the title page should be carefully examined, and although this practice would seem to be one dictated by reason and common sense, yet experience teaches us that not one man in twelve is possessed, in this respect at least, of either one or the other. The casual observer looks at the contents, the artist at the detail; with the latter, the title page of a book proclaims its history, and by means of it he is enabled to estimate its probable value. Every title page contains, or should contain, the name of the work, the name of the author, the publisher's name and address, and the date, and now-a-days, so far as the actual reading of these is concerned, nothing can be easier. It is far different, however, with some of the books printed in the 15th, 16th, and 17th Centuries, for many of them are written in Latin, and should this prove to be the case, the name of the town from which the book was issued bears in many instances not the slightest resemblance to its appellation of to-day. For example, we take up a work entitled " Tacitus cum Notis Grotii," described as being printed at "Lugd. Bat.," in the year 1640. The words "Lugd. Bat." would not strike anyone as standing for the University City of Leyden, or Leida, as it was anciently called. The words in full are "Lugdunum Batavorum," and it was from this city of Leyden that so many beautiful specimens of the Elzevir Press proceeded. So, also, the date will frequently be found written in Roman numerals, occasionally inverted, causing the greatest inconvenience to anyone who is not in the habit of either using or seeing them. We shall proceed, therefore, in this chapter to give a list of towns where printing was anciently carried on, with their English equivalents, not noticing those, however, where the nomenclature is the same. We then propose to add a few remarks on numeration, so that the learner may be prepared for further progress. To begin at the beginning, and to carefully consider every step taken, is the only satisfactory course that can be adopted in matters of this kind. The ancient names of the towns are given in alphabetical order.

It is not pretended for a moment that the above list comprises all the places where printing was anciently carried on; on the contrary, there were scattered over Europe numberless small and unimportant towns possessing one or more presses, from which copies of books were rapidly issued, and many of which are often to be met with. A complete list of these towns would occupy a large volume, and it was therefore thought expedient to enumerate those only which may be considered important, either in the quantity of books from time to time printed there, or for some other sufficient reason.

With respect to the dates at the foot of the title pages of these old works, we have already said that the Roman system of notation was frequently adopted. As the system has in these days given rise to considerable perplexity, chiefly on account of the use of inverted letters, it will be well to observe, that when a small line is found over any of the numeral characters, the value of that character is thereby increased a thousandfold, thus; VIII = 8; VIII = 8000. As we have not yet arrived at the year 2000 Anno Domini, the only numeral likely to be affected is I standing for the unit, which is sometimes made to do duty for a thousand in the shape of I, leaving the centuries to be added according to the circumstances of the case. The form IDXXXI is equal therefore to MDXXXI, or, as we should write it, 1531. Unfortunately, however, the Romans were not satisfied with this easy system—it became necessary to complicate it a little; they therefore, in the first place, took the D, standing for 500, and split it in half, thus I; not with the object, it would seem, of altering the value, for that remained the same, but simply for the sake of a little variety. Accordingly, it is found that there are no less than six different ways of writing a thousand, many of which will frequently be come across in our future researches. They are, CII, CD, C, X, M. The third, fourth, and fifth of these signs are arbitrary only, and should be made a note of. To reduce the system to as succinct a form as possible, observe that the Romans used I for 1, V for 5, X for 10, L for 50, C for 100, D or I for 500, M or CII for 1000.

When any character was followed by one of *less* or *equal* value, the expression denoted the *sum* of their simple values, but when preceded by

one of less value the difference. Thus III stood for 3, IV for 4, and VI for 6, XL for 40, LXX for 70, and so on. Every O annexed to IO, and every C and O joined to CI_O increased its value tenfold; thus, IOO = 5000. As before stated, a line drawn over a character increased its value a thousand-fold; thus, V stood for 5000, C for 100,000. Example:

IO_OXXXI is eq 1 to 1521
IO_ODXXXXIV " " 1534

MI_OXL is equal to 1540
MDUXI " " 1611

CHAPTER IV.

CHRONOLOGICAL NOTES.

A Summary of the Principal Events in the History of Early Literature.

We have said that printing, as such, was actually employed some time before the era of Guttenburg and Füst, and that their early productions are generally known by the name of "block books," because the impression was transferred to vellum or some other suitable subject by means of a block of wood, upon which the types were carved. This was, of course, a distinct advance on the old manuscript system, and the present era of printing may therefore well be referred to the production of the first block book, which is supposed to have taken place in Germany in or about the year 1420. In the year following was born Caxton, the great English printer; and in 1438 the old system of block printing was practically superseded by the introduction of letters separately cut out of wood, so as to be readily movable and capable of arrangement. For twelve years this improved system was carried on, until in 1450 the type was separately cast in metal. The earliest *complete* printed book is known as the "Mazarine Bible," and is supposed to have been issued from the press of Guttenburg and Füst, at Mentz, in the year 1455. The original is to be found in the British Museum. In 1457 the same Füst printed the first book yet discovered, which bears a date; this was a Psalter, in Latin, and it also is to be found in a show case in the King's Library of the British Museum. All these and other books were printed, as were the ancient "blocks," on one side of the leaf only, and it was not until 1460 that any attempt was made to print on both sides. Simple as such a process may appear to us in the present age of newspapers, it was, in point of fact, about the last improvement made, and the most difficult one of all to effect. After this but few difficulties remained to be surmounted, and accordingly in the year 1465 we find a volume of Cicero in which Greek type has been extensively used. The printers who had up to the year 1462 congregated at Mayence, were in that year driven out of the town. Though many of them would seem to have promptly returned, numbers went away to other places, principally to Rome, Milan, and Venice. The first

book ever printed in the last-named town was, curiously enough, another volume of Cicero, printed by John de Spira. "Signatures," which have already been described as little numbers or letters found at the foot of many pages in nearly every book, were first introduced by Antonio Zorat, at Milan, in the year 1470, so that the student in his practical endeavours to ascertain the size of a book from its signatures, in the mode previously pointed out, need never be at a loss for specimens. It was many years after the death of Zorat, however, before these signatures became universally adopted, and in cases where they do not appear recourse must be had to the watermarks. Having arrived at the point when we are fairly launched on the great sea of letters, to sink or swim, as we may have a mind, it will be advisable to give a short chronology of principal events in connection with books or the lives of their printers. We will begin from the year 1470, marking the improvement of Antonio Zorat, above alluded to :

A.D.		A.D.	
1470.	A Sermon on the Presentation of the Virgin Mary, printed at Cologne. The earliest book known to have the pages numbered.	1495.	"Repeticion de Amores." The first practical work on chess, that by Caxton being merely a moralization of the game.
1471.	Two printers of the name of Swaynham and Paunarts petition the Pope for assistance, and inform him that the number of books they had printed amounted to 12,475. In all probability, Messrs. Swaynham and Paunarts had multiplied their total productions by a dozen or so, in order to arrive at the above quotation, but, even assuming this to be the case, it shows the rapid strides already being made in the art of printing.	1501.	Virgil. Issued from the Aldine Press, at Venice. The first book printed in italic type, and the earliest attempt to produce cheap books by compressing the matter into a small space and reducing the size of the page.
1473.	The Calendar or Almanack of John de Gamunda, which was compiled and written in Latin in the year 1439, was in this year printed with wooden blocks at Nuremberg. This is the earliest known printed ephemeris.	1501.	First Aldine edition of "Horace" printed this year at Venice.
1474.	"The Game and Playe of ye Chesse." The first book printed in England. Printed by Caxton, near Westminster Abbey.	1502.	The first Aldine edition of Dante's works printed at Venice, and the first book in which Aldus employed the well known device of the Amor.
1475.	The first cookery book. "Platine de Osonis et Honestae Voluptate et Valeitudine Libri." Folio. Venetis, 1745.	1507.	"Hylacomylus Cosmographiae Rudimenta," printed in Lorraine. In this work it was first proposed that the name America should be given to the Continent now so called.
1480.	The first Greek classic printed was a copy of "Æsop's Fables," printed at Milan in this year.	1510.	Vellum binding began to be stamped this year, leather and oaken boards still earlier.
1480.	The second edition of "Ye Game and Playe of ye Chesse," printed by Caxton. The first book printed in England with woodcuts.	1510.	"Opera Nova Contemplativa." The last block book printed at Venice by Giovanni Andreæ Vavasori.
1483.	"Concilium Buch." Folio, Augspurg, 1483. The most ancient armorial book of arms known, containing 9156 coats of arms and 44 woodcuts.	1529.	The New Testament. A fragment of the first edition of Tyndale's translation, which he was printing at Cologne when he was interdicted and obliged to quit the city. This is also the earliest specimen of a printed version of the Scriptures in English, the only remaining fragment of an edition of 3000 copies.
1490.	The art of engraving and working from plates of copper introduced.	1539.	The great Cromwell Bible. The first by authority in England.
1491.	Caxton died.	1576.	Lombardi (William). "A Perambulation of Kent, &c." 8vo. The first English county history.
1493.	The first printed document relative to America bears this date. It consists of a letter written by Columbus eight months after his discoveries, and translated into Latin by Alexander de Ciso.	1588.	"Characterie; an Art of Short, Swift, and Secret Writing by Character." The first work in English on Shorthand. In this same year was printed the first attempt at blank verse in English, which bears the title "Elizabeth Triumphant, Concerning the Damned Practices that the Devilish Popes of Rome have Used, &c." This is an amusing book in many ways, and for a choice selection of expletives, is unrivaled.
1495.	Wynkyn de Worde established a press at Westminster, and issued a book entitled "De Proprietatibus Rerum," which is said to be the first work printed on paper of English manufacture.		

A.D.		A.D.	
1595.	First part of a printed catalogue of books for sale in England was published by Andrew Maunsell, London, 1595; folio. The second part appeared the same year, the third part never appeared.	1690.	White paper first used in England; before this date, nothing but brown was manufactured.
1603.	In this year, Sir Thomas Bodley was appointed founder of the Oxford Library, which at the time contained 2000 volumes.	1694.	The last restrictive laws against the press expired in this year, and from this date it has generally been considered to be free.
1605.	The first catalogue of the Bodleian Library issued.	1701.	Stereotyping invented.
1610.	The first stone of the Bodleian Library laid.	1709.	No. 1 of the "Tatler," by Sir R. Steele.

1616.	On the 23rd of September in this year died William Shakspere and Michael Cervantes.	1712.	The first newspaper stamp imposed.
1620.	"Novum Organum," by Lord Bacon, folio, first edition.	1713.	The Clarendon Press at Oxford was first opened this year, but the old imprint, "E. Theatro Sheldoniano," continued until 1759.
1621.	The first edition of Burton's "Anatomy of Melancholy" published.	1731.	"The Gentleman's Magazine" commenced by Edward Cave, printer, St. John's Gate, Clerkenwell.
1623.	The first folio of Shakspere's complete works published by Isaac Jaggard and Edward Blount. The second edition is dated 1632, and the third 1665. All these editions are valuable.	1740.	The first circulating library in London, No. 132, Strand.
1639.	The first provincial newspaper published at Newcastle-upon-Tyne, by Robert Barker.	1745.	Dr. Jonathan Swift died, November 30th, this year.
1640.	The Star Chamber abolished.	1754.	June. No. 1, "Annual Register," by R. Dodsley.
1653.	First edition of "Isaac Walton's Compleat Angler."	1755.	First edition of "Johnson's Dictionary," for which he received £1575.
1664.	"Poor Robin's Almanack" published.	1757.	Horace Walpole's private press at Strawberry Hill established.
1666.	In the great fire of London, which took place on the 4th of September in this year, no less than £300,000 worth of books, stored in the crypts of Old St. Paul's, were totally destroyed.	1758.	"Virgilius," 4to, printed by Baskerville, of Birmingham. His first issue, and the first work printed on wove paper.
1674.	John Milton died.	1769.	"The Nautical Almanack" commenced by Dr. Maskelyne, continued by Government, and generally published three years in advance.
1677.	The first "London Directory."	1770.	In this year was published "History and the Art of Printing," by Philip Luckombe, which is said to be the best and most satisfactory of the kind extant.
		1800.	Lithographic printing invented by Seneffolder.

We have thus presented a few of the most important dates in the history of books. The data furnished are necessarily imperfect, and, indeed, the immense number that would have to be collected before anything like a respectable list could be compiled, is sufficient apology in itself. The reader can easily extend the list, and during the course of his reading it would be as well for him to make a note of anything that strikes him as being peculiarly interesting. Should he do this, he will speedily find that there is practically no limit to his researches, nor end to his notes, and that all he can hope to do is to make as judicious and comprehensive a collection as possible. It is principally for the purpose of a basis and a model that the short chronology has been introduced, and it will be found useful as such if the student will apply himself to augment the list.

CHAPTER V.

TECHNICAL TERMS.

List of the principal Technical Terms used by Booksellers and Printers, with Explanations.

The list of technical terms which follows has been compiled from various sources, but principally from "Power's Handy Book about Books," published in 1870, by John Wilson, of No. 93, Great Russell Street, Bloomsbury, W.C. This book is referred to as being one of the best practical manuals extant, and anyone who takes an interest in literary and other pursuits of a similar nature will do well to purchase it. It will be frequently referred to in subsequent chapters.

Advance Sheets.—Sometimes called "Early copies." Portions of a work supplied elsewhere previous to publication, generally for simultaneous reproduction. Many English authors supply "advance sheets" to American publishers, so that the work can be brought out in England and America simultaneously.

Allonym.—A false proper name. A work published to deceive, under the name of some author, but not by him, as "Peter Parley's Annual."

Almanack Day.—The day on which almanacks are issued by the publishers to the trade, usually the 21st of November in every year.

Anastatic Printing.—A mode of obtaining fac-simile impressions of any printed page or engraving without re-setting the types or re-engraving the plate. The page to be copied is first saturated with a solution of nitric acid, which does not affect the printers' ink. A transfer is then taken on a plate of zinc, which is in process of time eaten away by the acid from the non-printed part of the page. This leaves the printed portion in relief.

Anonymous.—Without a name.

Apoconym.—A name deprived of one or more of its initial letters.

Author's Proof.—The proof taken after the first proof is corrected, and sent to the author for correction & amendment.

Autonym.—An author's real name.

Bands.—Pieces of leather, cardboard, or other suitable substance glued to the back of a book previous to covering. The space between these is called "between bands." The strings whereon the sheets of a volume are sewn.

Bastard Fount.—Small-faced type upon a larger body, adopted for the purpose of making

the printed pages look as if they had been leaded.

Basil.—Tanned sheepskin, used for common bindings. Books bound in sheepskin are sometimes described in catalogues by the contraction "sh.,"

Black Letter.—A peculiar kind of type formerly used in this country, generally known elsewhere as "Flemish or German character." The following is a specimen of black letter type:

Household Journal.

Block Books.—Books printed from engraved blocks of wood on one side of the leaf only. A reference to these has already been made.

Boards.—Books are sometimes described as being in "boards." This refers to the binding, and they are so described when bound in paper or cloth.

Books Uncut.—An uncut book is one that has not been primed by the binder's knife. It is a mistake to suppose that the term has reference only to those books which have not been cut for reading, for, even if they have, they may be still "uncut" in the technical sense of the term.

Bosses.—Plates of metal or other hard substance formerly attached to the corners of books as a preservation against injury.

Bourgeois.—A description of type ranking in size immediately after long primer, and very like brevier type.

Brace.—A character cut in metal, thus $\sim\sim$.

Brevier.—A description of type. The text of the present chapter is printed in brevier.

Broadside.—One full page, printed on one side of a whole sheet of paper.

Canon.—This is the largest type that has a specific name. There are larger descriptions of type, which are frequently termed four, five, six, &c., line pica. The following is an example of canon type:

Canon

Catchword.—The last word occurring after the last line of a page, such word being repeated immediately on the top of the following page. Catchwords are still used in Acts of Parliament and a few official documents.

Chap Book.—A small book or pamphlet carried about for sale by hawkers. "Last dying speeches and confessions" are familiar examples of chap books.

Chronogram.—An inscription usually found in old books in which a certain date is expressed by Roman numerals, as for example: "My Day Is Closed In Immortality," the result being MDCHII., the year in which Queen Elizabeth died.

Colophon.—The conclusion of a book where it contains formal matter only, such as the date or place of publication.

Diamond Type.—The smallest size type in use in England; there are 2300 letters to a pound weight:

Specimen of Diamond Type.

Double Book.—A book printed on half sheets.

Double Pica.—A type about twice the size of small pica. Specimen:

Double Pica.

Duodecimo.—Sometimes called twelve-mo, and generally written 12mo. Already described as a book printed on paper folded into twelve leaves, that is twenty-four pages. The signatures are B, B 2, and B 3 on the first, third, and ninth pages.

Emerald.—A type of a size between nonpareil and minion, and now but little used. However, for the sake of consistency, we give an example:

Specimen of Emerald Roman.

End Papers.—The blank leaves at the beginning and end of a book. More commonly called fly leaves.

English.—A type the next size larger than pica, and generally used for large Bibles. The following is an example:

Specimen of English.

Extra.—Sometimes described as "Calf Extra." A term applied to a book which is bound in a superior manner, well forwarded, lined with good marble paper, and has silk "headbands," and gilt with a narrow roll round the sides and inside the "squares" (for the meaning of which see *post*).

Fac.—Small wooden or metal square blocks, with emblematical figures carved thereon, having a hole in the centre to admit a capital letter. The large and fantastically graven initial letters sometimes seen at the commencement of every chapter are produced by "Fac."

Folio.—A term referring to the size of a book printed on paper folded into two leaves or four pages. It has been already described.

Forrell.—Rough skins, anciently used for binding purposes.

Forwarding.—The art of the bookbinder, comprising all his work up to the time when it is ready for colouring.

Great Primer.—A type sometimes called "Bible Text." Specimen:

Great Primer.

Grooves.—The projections formed on the sides of books in backin, to admit of the boards laying even with the back when faced in.

Headband.—The silk or cotton ornament placed at the top and bottom of the back of a book.

Half Bound.—When the back and corners of a book only are covered with leather and the sides with paper or cloth, it is said to be half bound; "hf. bd." in catalogues.

Imprint.—The name of the place where any particular book was printed.

Its Own Paper.—When several copies of a sheet of a work are printed on the paper that the whole work is intended to be printed on, it is said to be "pulled on its own paper."

Large Paper.—Paper of an extra size, so that works printed on large paper have wide margins.

Lithography.—The art of engraving on stone and of transferring the impression to paper.

Logo-type.—A whole word cast in one block is a logo-type; but the system never prevailed to any extent, as compositors prefer to spell their words out for themselves rather than have a multiplicity of little boxes in the cases.

Long Primer.—A type supposed to bear its name from the fact that it was at one time universally employed in printing primers. It is used where much matter is required to be got into a small space.

Specimen of Long Primer.

Millboard.—A thick kind of paper, used for the covering of books. Before the employment of millboards, books were either bound in calf or left unbound like modern French novels.

Minion.—The name of a type half the size of English, and principally used for newspapers. Example:

Specimen of Minion.

Nonpareil.—A type used for the same purpose as minion, and just one half the size of Pica. Example:

Specimen of Nonpareil.

Octavo.—Contraction, oct., 8vo, already described as the size of a book printed on paper folded into eight, or sixteen pages. The signatures are B, B 2, B 3, on pages 1, 3, and 5. The usual sizes are Imperial 8vo, Royal 8vo, Demy 8vo, Crown 8vo, Post 8vo, and Foolscape 8vo.

Out of Print.—A book is said to be out of print when the publisher has no more copies on hand.

Pamphlet.—Any work which does not exceed five sheets octavo.

Paragon.—A type one size larger than Great Primer, but which is now very nearly obsolete.

Pasteboard.—A substance used in bookbinding, and made of sheets of paper glued together. Pasteboard superseded the old wooden boards, and has itself been superseded by millboard.

Pearl.—A kind of type used principally for pocket Bibles, dictionaries, and the like. Thus:

Specimen of Pearl.

Pica.—The standard type by which all other sizes of type are classified. Example:

Specimen of Pica Type.

Quarto.—Contraction, 4to. The size of a book printed on paper folded into four leaves, having eight pages. The signatures are B, B 2, on pages 1 and 3.

Recto.—Used to denote the page of a book printed on the right-hand side, always the odd page.

Register.—A term used in printing when one page is exactly printed on the back of another.

Reprint.—Sometimes called Excerpt. The whole or part of a re-issued book.

Ruby.—A kind of type, next in size larger than pearl, and smaller than nonpareil; it is half the size of small pica. These "Terms" are printed in ruby.

Script.—The name of a class of type made to imitate writing. Example:

Sextdecimo.—Contraction 16mo.; previously described as being the size of a book or paper folded into 16 leaves, making 32 pages. The signatures are: B, B 2, B 3, B 4, B 5, B 6, B 7, B 8, on pages 1, 3, 5, 7, 9, 11, 13, and 15 respectively.

Signatures.—The capital letters or figures under the foot line of the first page of each

sheet of a book to indicate their order in binding. The invention of signatures is usually accredited to Zeno, of Milan, in the year 1470.

Small Pica.—A size of type less than pica. Novels are generally printed in this body.

Example:

Specimen of Small Pica.

Squares.—The portion of the boards of a volume which project over the edges.

Super-extra.—Has reference, like "extra," to the binding of a book, which must, in order to earn this title, be "forwarded" in the best manner, with coloured "end papers," double "head bands," and broad "registers."

Superiors.—Small letters or figures placed above a word, and having reference to a foot note, are called superiors.

Tail Piece.—An ornament placed in a short page to fill up the space.

Type.—The letters employed in printing, usually cast in metal. We have described many of the different kinds of type, principally those in ordinary use. Besides these, however, there are other types, such as "Trafalgar," "two-line English," "two-line double pica," "two-line great primer," and "two-line pica."

Verso.—The pages of a book on the reverse or left hand side, in contradistinction to the recto.

Water Mark.—An ornamental figure placed upon the wires of the mould, leaving its impression on the paper as it dries. A "water mark" will be found on every Bank of England note.

In the above list of technical terms it will probably be noticed that no attempt has been made to describe the different kinds of papers.

In the first chapter the dimensions of the more important descriptions were given, and further than this it is not thought necessary to go. This is owing to the fact of there being several thousand distinct varieties, an enumeration of which would convert any work that dealt with them into a description of the paper trade. It must be remembered that whatever the kind of paper employed, whether toned or white, the sheets are generally of the dimensions given; and the size of the paper, with a view to the determination of the size of the book, is all that need interest the general reader.

CHAPTER VI.

FORMATION OF A LIBRARY.

On the Formation of a Useful Library, with Practical Hints for the Collection, Custody, and Preservation of Books.

IT is an axiom sufficiently well understood by all collectors of books that the value of a library must depend almost entirely upon the skill of the particular collector. A mass of books brought together on no principle, and without any, or with but little regard to classification, can hardly be called a library, even although the collection may consist of many thousands of volumes. What is required is that the shelves shall contain a sufficient number of works upon some special subject, or upon any subject, and that they shall be selected with a due regard for value and utility.

It is of course impossible for any collector, whether he be a single person or a body corporate, such as the British Museum, to form a *complete* collection of all the works extant; all that can be attempted is to amass a sufficient number of really useful books, the best of their class, and as cheaply and expeditiously as possible. The Trustees of the British Museum have more than 600,000 volumes in their possession; and these probably do not represent one-third of the number that might be collected. It is, therefore, useless for any private individual to seek to do more than form a good and useful library; and with this object we purpose, in the second part of this work, to give a list of the best books on a great variety of subjects, and in order to make the list as complete as possible the present value of each work will be appended. In the formation of a private library the only guides that can be laid down are, of course, the taste and habits of the possessor. Some may wish to form a collection of works of fiction only; others may be scientifically inclined; others, again, may have a *penchant* for philosophy or the fine arts, and may seek to possess themselves of no other works but such as may refer to any of these subjects. By far the greater class of book collectors would, however, seem to collect anything that may happen to come in their way, without the slightest regard to their contents, which, as a matter of fact, they seldom peruse.

These people are called "Bibliomaniacs;" and although they number among

their ranks many famous collectors of books whose knowledge is proverbial in the literary world, yet for the most part the "bibliomaniac" cares but little for the *character* of his books ; all he hopes for is to possess a quantity in contradistinction to quality. He has a "craze," an earnest desire to possess something, in fact, anything, in the way of a book and nothing more. He says to himself, "When I have collected all the works I can get on such and such a subject, then I will read them ;" and so he goes on collecting and never reading except at desultory intervals. The "bibliomaniac" can get all the information he wants out of any large public catalogue, and all that then remains for him to do is to set to work and "collect" as many of them as he possibly can. We should not advise anyone to adopt such a system as this ; and we shall therefore merely present a moderate list of works upon different subjects, and this list can be augmented at pleasure.

The student should in the first instance possess himself of a good and useful collection of works of reference, and we can with confidence recommend "Lowndes' Manual," a book published in six volumes. It is scarce, and always commands a fair price, but for concise information on all questions relating to books cannot be surpassed. If advertised for it might be procured for about £3; any bookseller would probably charge £5. "Murray's Family Library," "Chambers's Encyclopædia," or the "Encyclopædia Britannica," are also good works of reference. The "Britannica," last edition of 1860, may be purchased for about £7; it consists of 22 vols. in 4to. Another and much improved edition is in course of preparation ; but it will be found that the edition of 1860 will answer all practical purposes, while it has the merit of being much cheaper than the future edition is likely to be. Power's "Handy Book about Books," already referred to, should not be forgotten ; it is now out of print, but may be met with frequently for about 7s. 6d. or 10s. It will readily be seen, therefore, that the first object of a book collector is, or should be, the collection of works of reference, works which may help him to further information ; and to summarise the matter, we should advise him to procure the following :

<ol style="list-style-type: none"> 1. <i>Encyclopædia Britannica</i>. 1860. 22 vols., 4to. About £7. 2. <i>Dibdin's Bibliomania</i>. 8vo. 1876. About 16s. 3. <i>Lowndes' Bibliographer's Manual</i>. 6 vols., 8vo. London, 1860. About £3. 4. <i>Power's Handy Book about Books</i>. 8vo. 1870. Six 12s. 	<ol style="list-style-type: none"> 5. <i>Watt's Bibliotheca Britannica</i>. 4 vols., 4to. 1824. Value 24. A very useful and learned work, and one most laboriously compiled. 6. <i>The Publisher's Circular</i>, containing a com- plete alphabetical list of all new works published in Great Britain, and every work of interest published abroad. 8vo. 1837 to present date. Value about £2.
---	---

With these six works, which may very probably be picked up at a cheaper rate than the prices quoted, the collector should experience no difficulty in forming a library on any subject, and, what is very important, he will readily be enabled to obtain a "history" of almost any book he is likely to come across. Books, like men, have a history of their own, and in many cases a very important history, marking social and historical epochs, and giving an insight into the manners and customs of the age wherein they were published. The

Lover of books, therefore, is necessarily a man of education, for after a time he cannot help associating his volumes with incidents of the past.

After a number of good and serviceable books have been collected, the next care, says Axon, should be their classification for arrangement on the shelves. As this learned writer points out, it is a matter of considerable difficulty to arrange a number of volumes, for some of them are necessarily of such a dubious and complex nature that it is difficult to decide in what section they are to be placed. It is accordingly advisable to keep a careful catalogue, arranged under the author's name, and also under the title; and in cases where any particular work refers to a number of subjects, these subjects should also be entered with an appropriate reference.

It is needless to say that the collector should keep his books in a warm and dry place, otherwise they will speedily become mildewed. The mildew shows itself in the form of roundish or irregular brown spots, and cannot be cured. After the process has once commenced it can only be checked by the utmost attention to dryness.

Bookworms are also a source of continual trouble and annoyance, and the ravages these little pests can commit is beyond belief to any one who has not had a practical experience of them. By some unexplainable sagacity, they would appear to choose the best and most expensive works, and these they bore through, leaving in their wake a round hole, utterly ruining, of course, the appearance of the volume.

The best method of putting a stop to their depredations is to take equal parts of powdered camphor and finely chopped tobacco, and then to sprinkle this mixture over the shelves. This operation should be repeated every six or eight months.

If it should be found necessary to remove stains of any kind from the interior or exterior of a work, observe that for removing writing ink it will be convenient to use spirits of salts diluted with five or six times its bulk of water. Apply the solution to the spot, and after a short time wash it off with clean water. A solution of chloride of lime will answer the same purpose. Grease or wax spots may easily be removed by washing the part with ether or benzine, placing the part between blotting paper, and then passing a hot iron over it.

The remedy against oil stains is sulphuric ether. If the stains are extensive, roll up the leaf and insert it in a flat mouthed bottle, half full of sulphuric ether, and shake it gently up and down for a brief period. On removal the stains will have disappeared, the ether rapidly evaporates from the paper, and a little cold water is all that is required afterwards. In many cases the leather bindings on old books will be found to be dilapidated. Should the leather be broken, rubbed, or decayed, plaster the part with paste to fill up the holes; then take the yolk of an egg, beat it up with a fork, and apply it to the leather with a sponge, having first cleansed it with a dry cloth. To produce a polished surface a hot iron must be passed over the leather. There is also a varnish made in France, called "French varnish for leather," which costs about 14s. a

pound ; it may be had at any oil and colourman's. There are several processes for restoring books which are very much soiled, but as they involve, in every instance, the pulling the work to pieces, it will be better to have it done by a bookbinder. Many other useful recipes on subjects similar to the preceding will be found in Bonnardot's " Essai sur l'Art de Restaurer les Estampes et les Livres" (Paris, 1858), a work described as being the best on the subject, and full of useful recipes.

A small pamphlet, entitled " Handbook of Taste in Bookbinding," gives many hints relative to the binding of books which are well worthy of consideration. To describe the well known materials, such as Morocco, Russia, Calf, and the rest, would be a superfluous task, as they are perfectly well known to most people, whether book collectors or not. Their applicability to any particular class of work depends, of course, on the question of price, and not of taste. Some collectors have as many of their books bound alike as is possible, and taste would seem to require that the binding should be " neat, not gaudy ; " for nothing looks so much out of place as a row of gilded volumes, and nothing certainly could better describe the habits of their owner. Let the books, therefore, be well bound, always remembering that a profusion of gilt is to be deprecated. In the first place, it adds greatly to the expense ; and, secondly, does not maintain its brilliancy for any great length of time. A half-bound book (a book which has the corners and back only covered with leather and the sides with paper or cloth), with just sufficient lettering to enable the title to be discovered by inspection, would seem to be the most wearable.

In some instances, of course, to rebind a book is simply to spoil it, for many volumes derive their value from the curious character of the binding only, and this is observable chiefly in specimens of typography issued from the earlier presses. In these instances, the work should be preserved in its original frame as long as it will hold together, and even then it will in most cases be more judicious to keep the binding repaired rather than to have the work rebound.

Again, the value of many books is dependent on their being uncut, i.e., the edges of the leaves not having been ploughed even. Numerous stories could be told of valuable books being ruined by ignorant binders cutting the edges " to make them look nice."

CHAPTER VII.

THE VALUE OF BOOKS.

General Remarks—The System of Valuation—Works of Reference.

IN this, the last chapter of the first section of our subject, and before proceeding to enumerate and classify the various works which we shall in the second section select as being especially noticeable, it would be as well to arrive at some definite conclusion as to the mode to be adopted in assessing the value of any particular book. Like every other thing, a book is worth precisely what it will fetch in the market, and no more. Any specific article may, of course, have what we shall call, for the sake of distinction, a fictitious value, that is to say, a value based to a large extent on circumstances, and without much reference to the market price of identical objects. For instance, the reader may be in possession of an old Bible, the actual market value of which may be reckoned in pence, but he would, perhaps, decline to part with it for as many pounds, simply because it was his father's, and, possibly, his grandfather's also. To the owner the old Bible is worth £20, to the book buyer 20d. Now let us assume that the Bible referred to is at last found on the shelves of a bookseller, and displayed for sale in the usual fashion. We shall now find that the price has risen very considerably. True, the bookseller would not think of asking £20 for such a work, but he might ask 20s., and so the book which, in point of fact, is worth but a few pence, is now worth as many shillings; and should it subsequently fall into the possession of a noted collector it may be knocked down, after his decease, at a much advanced price still. All these values are fictitious, even the bookseller's, for he sells the book for what he can get, that is to say, what it is worth to *him*. To you or to me the book is not worth that amount, for if we got it we should find that in case we determined to sell it again the obtainable price would be wofully below what we originally supposed to be the market value. All this is easy enough to comprehend. The actual value of the book as sold by the bookseller is just the selling price, plus proportionate rates, taxes, rent, wages, and fair profit. The only occasion on which the full value can be got for the

money is when the buyer knows the proper price and the bookseller does not know his own business, and accordingly we find the "bibliomaniacs" haunting bookstalls rather than bookshops, because here they have not to pay for rent, wages, and the like, and very possibly may find it worth their while in other respects. If anyone would prove the truth of these assertions, let him attend an ordinary sale by auction, and he will speedily see what a book is really and actually *worth*, and if he should call next day on the bookseller who bought it he will also see what he will have to give for it then. All this on the part of the bookseller is very right and proper; he is entitled to his profit, and the book is *worth* to him what he can get for it. The collector, however, should endeavour to purchase in the cheapest market, and this will usually be found on the bookstall and in the auction room. Should he be specially in want of any particular work which he can afford to pay for, he can consult some of the very excellently informed booksellers whose names we shall have occasion frequently to mention.

The reader will now be in a position to understand the system upon which the value of books will be assessed in our subsequent chapters—not what he would have to give for the articles in a bookseller's shop, but what they are actually worth to the collector himself, so that he can, if necessity should unfortunately compel him to dispose of his collection, be sure of losing but little, if anything, through his hobby. In cases where books have an arbitrary value by reason of their excessive scarcity, or for some other reason, the mode of assessment will be different, for books of this class will always sell, some of them at almost any price, and the collector cannot do wrong should he purchase them at any reasonable figure. One would have thought that there would have been no lack of works treating on the general question of the value of books, but, on investigation, it will be found that although such is the case, yet for the most part they are almost, if not entirely, useless as *manuals*. By far the greater number treat of special collections in some public or private library, which though, without doubt, very useful under particular circumstances, are yet hardly suitable for the learner. For instance, and by way of example, Flindall, in the year 1813, wrote a work entitled the "Amateur's Pocket Companion," and, judging from the title only, one would be apt to say that this was the very work required for the purpose of instruction. On perusing it the reader will find that its contents consist entirely of a catalogue of rare and curious works in "Granger's History," arranged, moreover, under the names of the authors. Such a work as this is entirely useless when placed in the hands of an amateur; for, in the first place, he would be unable to find a book on any given subject without searching through the greater part of the list; and secondly, no idea whatever of the probable value is given. It is simply a library catalogue, and nothing more. Carlyle's pamphlet "On the Choice of Books" consists of a biography of the late Thomas Carlyle, followed by the text of an address delivered to the students of Edinburgh University. Chapman's "Cheap Books, and How to Get Them" is merely an essay on the woeful effects of the paper

duty, and the necessity for its abolition; and so we go on through a list of works which from their titles would seem to be useful, but which in reality are not. Lowndes' "Bibliographer's Manual" is better, and indeed a most useful work of reference, but here the subjects are arranged under the authors' names. The best work of all, to our mind, and one which bears the nearest approach to the system intended to be adopted, is Watt's "Bibliotheca Britannica," already referred to. Two of the volumes consist of a list of authors, and the books written by them, and the other two of the subjects, but in neither case are the values mentioned, and the list is only carried up to the year 1824. The compilation of this work must have occupied the author for years, for he has sought to catalogue under their respective headings *all* the works known to bibliographers, and it must be admitted that he has succeeded remarkably well. We think we are right, however, when we say that there is at the present time no work which accurately catalogues the *best* books on a multiplicity of subjects, arranged under the headings of the subjects themselves—no work which gives the description and value of the books referred to, and certainly none which combines both these merits in one system.

It is not, of course, possible, in the confined space at disposal, to give a very large and extensive list, but it will be found large enough for the purpose of assisting the student to form a library of several thousand volumes, while to the non-collector it will be found useful for purposes of reference.

SECTION II.—BOOKS AND THEIR VALUE.

CHAPTER VIII.

SCIENTIFIC WORKS.

Natural History : Zoology—Works on the Mammalia and General Zoology.

BEFORE proceeding to enumerate the various works treating on this important subject, it will be necessary to point out the limits within which we propose to confine ourselves, and at the same time to map out the subdivisions which the subject itself embraces.

We have no intention of employing the term "Natural History" in its most extended sense, as this would render the present work complicated and unwieldy in the extreme ; we merely take its conventional meaning—"the science which describes organic life and its immediate connections"—this definition being, in point of fact, synonymous with "Biology." We believe that, although not absolutely exact, yet this method of treating this division has in its favour a preponderance of convenience, since "Biology" embraces the two great divisions of Zoology and Botany, each in itself very comprehensive. Under the former we include Ornithology, Entomology, and similar subdivisions bearing on all living organisms ; while the latter, although not itself capable of further subdivision, will be found sufficiently important to claim a chapter or so to itself. We thus, as will be seen, cover under one restricted definition much valuable ground—all, in fact, that may be fairly considered to come under the head of Natural History.

The following table will explain the system :

(a) NATURAL HISTORY.

Sub. Sec. A.—ZOOLOGY.

Sub. Sec. B.—BOTANY.

1. Works on the Mammalia and General Zoology.	2. Books on Ornithology.	3. Ichthyology.	4. Entomology.	5. Anthropology and Ethnology.
			6. Reptiles.	7. Conchology, The Crustacees and Zoophytes.

To facilitate reference, the subjects are arranged alphabetically under the author's name.

PONTOPPIDAN (Rev. Eric), *The Natural History of Norway*, London, 1755, folio; about 20s. This work contains much valuable information on subjects of Natural History, and at page 196 will be found an engraving of the famous Sea Serpent, which the author says he distinctly saw.

— *Transactions of the Zoological Society of London*, 1835 to date. A complete set of these Transactions is worth £50 at least. There are only 10 vols. altogether. Some of the volumes are excessively rare, and this, of course, has an influence on the value of which they form part. The "Transactions" must not be confounded with the "Proceedings of the Zoological Society of London," which is a separate work altogether. The Great Zoological Artist, JOSEPH WOLF, illustrated at different times a great number of works, and his drawings are highly prized as monuments of artistic skill. Among other works, he illustrated Siebold's "Birds of Japan," and Elliott's "Phasianidae," both of which works will subsequently be referred to. Wolf also drew for the Zoological Society of London a series of Sketches on imperial folio, published in 1861, coloured plates, value £3.

In the above list, school books and introductions to the science have been omitted, as they can, in most cases, be procured at the published prices, while any information concerning them can readily be obtained from any bookseller.

The principal publisher of works of this class is Mr. Van Voorst, Pater-noster-row, London.

SCIENTIFIC VOYAGES AND TRAVELS.

We have now completed what we may possibly be permitted to call the "working" sciences, and under the respective headings will be found a list of the more important works on the particular subjects to which they refer. There are a class of books, however, which deal with many, and in some instances all, of the sciences which we have already enumerated; and as these are of the highest importance, it is thought expedient to range them under a separate heading, rather than under any one of the classes of subjects upon which they treat. There have from time to time been fitted out, either at the public expense or privately, scientific expeditions to different countries, under

the charge of scientists of the very highest repute, assisted by other scientists of experience in their own departments; and the result of the various expeditions has, in many cases, been followed by a suitable publication. We consequently append a short list of works describing these scientific voyages, premising that each of the works referred to contains chapters or sections exclusively devoted to one particular branch of scientific study, so that in the compass of a single publication the reader will often find a store of valuable learning relating to a number of subjects which we have already, to some extent, treated in the previous pages.

ASTROLABE, VOYAGE OF. A perfect set of these Voyages consists of 12 vols., royal 8vo; 5 vols. imperial, folio; and 2 other volumes. The work contains accounts of researches in zoology, entomology, botany, philology, and meteorology, and is worth about £22. Published in Paris, 1830-35.

BEALE, VOYAGE OF, under the command of Captain Fitzroy, consisting of 5 vols., royal 4to, 1839-43. Edited by C. DARWIN. Contents: Fossil Mammalia, Mammalia, Birds, Fish, Reptiles; value £10.

—**VOYAGE OF,** by Stokes; 2 vols., 8vo, 1846; 17s. 6d.

BLOSSOM, VOYAGE OF, Beechey's Zoology of the Pacific and Behring's Straits, 4to, 1839; value £2 10s. This work embraces a great quantity of information on most of the subjects already referred to. The same author, Captain F. W. Beechey, published other works, containing frequent references to scientific subjects.

CHALLENGER, VOYAGE OF. Thompson. 3 vols., 8vo, 1875; 20s.

COQUEILLE, VOYAGE DE LA. Par J. L. DUPERREY. 8 vols., imperial 4to, Paris, 1826-30; value £15 16s. There are also two Atlases in folio belonging to the set.

CURACAO, VOYAGE OF THE. Imperial 8vo, London, 1873; 20s.

EREBUS AND TERROR, ANTARCTIC VOYAGE OF THE. Complete in 24 Parts, royal 4to, edited by J. RICHARDSON and J. E. GRAY, coloured, 1844-73; value, perhaps, £20, or thereabouts. This work includes notes on almost every subject which can fairly be classed under the head of Zoology.

HERALD, ZOOLOGICAL VOYAGE OF. Soheran and Co. Royal 4to, published at £2 2s.; value 10s.

HORSEFIELD, ZOOLOGICAL RESEARCHES IN JAVA AND THE NEIGHBOURING ISLANDS, 8 Parts, complete, royal 4to, 1824; £2 16s.

HUMBOLDT (Baron), VOYAGES AUX RÉGIONS ÉQUINOCIALES DE LE NOUVEAU CONTINENT, 8 vols., atlas folio, and 6 vols., colombier folio, Paris, 1803-34. A very splendid and valuable work, in fact, all books upon this and similar subjects are necessarily more or less valuable, owing to their limited circulation and the large sums spent in drawing and colouring

the subjects referred to. A set of Humboldt's Voyages is worth £20 at the least, and would easily sell at that figure.

RECHERCHE, VOYAGE DE LA. Complete in 8 vols., 8vo; 1 vol., 4to; and 2 vols., imperial folio, Paris, 1838-52; £10 10s. A second part of the above, consisting of 16 vols., 8vo, and 3 vols., imperial folio, Paris, 1838-52, is also to be met with; value about £15. The first and second parts sold together would well be worth £22.

RICHARDSON (John), SWAINSON (William), and KIRBY (W.), Fauna Boreo-Americanana, or the Zoology of North America, containing Descriptions of the Subjects Collected in the late Northern Expedition under Sir John Franklin, 4 vols., 4to, 1829-37, 110 plates; value £7 7s.

SAMARANG, VOYAGE OF, IN THE EAST-INDIAN SEAS, 1848-50, complete in 7 Parts, royal 4to, 55 coloured plates; value £3 3s.

SPRATT (T. A. B.), Travels and Researches in Crete, 2 vols., 8vo, 1865; 12s. 6d.

—**Travels in Lydia,** 2 vols., 8vo, 1847; 12s. 6d.

CHAPTER XV.

SCIENTIFIC WORKS.

Works on Occult Philosophy.

SOME little apology may be considered due to the reader for the introduction of Occult Philosophy among the sciences. It is true that this kind of knowledge is, and has been for some time, gradually but surely on the wane; and in the present century a knowledge of Astrology and the Black Art is not considered an indispensable adjunct to the education of a gentleman. In this respect, therefore, some slight explanation is fairly called for. The reason why a list of works on the subject is given is because, notwithstanding the death of the *quondam* science, great curiosity respecting works of the kind is evinced by the public. The booksellers, if asked, will say that they cannot procure these works in sufficient quantities, and that whenever they are offered for sale they are immediately bought up at extravagant prices. In the face of such a demand, therefore, it is considered that a list of the more famous works cannot be out of place, more especially as none exists at the present time in the English language, and, we believe, only one in the French.

AGRICOLA (Georgius), *De Animantibus Subterraneis*, several editions, the first published in 1549, small 8vo, Frobenius; 5s.

Other Editions, 1561, 1614, and 1621, all of the same value. No English translation.

AGRIFFPA (Sir Henry), *Works on Occult Philosophy*, *Opera Omnia*, Luggd., 1531, 2 vols., 8vo; 17s. Ditto, Leyden, 1550, 2 vols., 8vo; 17s.

— (published separately), *Of the Vanity of Arts and Sciences*, London, 4to, 1569; 10s.

Another Edition, 1676, 8vo; 5s.

— *Three Books of Occult Philosophy*, London, 1641, 4to; 20s.

— *A Fourth Book of Occult Philosophy*, translated by Turner, London, 1665, 4to; 5s. This fourth book is considered to be spurious, but it is, notwithstanding, largely perused by the learned in such matters.

ARRAIS, *Arbor Vite*, 8vo, 1633; 3s. 6d. The only edition extant.

ALCHABITIUS, *Libellus Yeagogicus*, 4to, no date (c. 1500); 20s.

ARTEMIDORUS on Dreams, Luggd. apud Gryph., 1546, 8vo; £2. An edition of 1755 can be got for a few shillings, and other editions also at the same price. This work is without doubt the best work of the kind on the subject. The

author spent the whole of his life in the collection of "facts," from which he attempted to draw logical deductions.

ARTEPHIUS, *De Transmutatione Metallica*, Paris, 1612; 18s. A work of great utility to the searchers after the Philosopher's Stone.

BARRATTS, *Magus*, 4to, London, 1801; 15s. There is a reprint in fac simile of this edition, value about the same.

BAXTER (A.), *An Enquiry into the Nature of the Human Soul*, London, 1745, 8vo, 2 vols., Appendix, 1750, 1 vol.; 16s. Third and best edition. The appendix is of rare occurrence.

BAXTER (R.), *Certainty of the World of Spirits*, 18mo, 1834; 1s. Many other editions, all of about the same value.

BEQUINUS and SANDIVOGIUS, *A New Light of Alchemy, with a Treatise on Sulphur*, 8vo, 1674; 7s. 6d.

BEHIMEN (I.), *Works by Law*, London, 1764-81, 4 vols., 4to, with explanatory plates; £4 4s.

BOISSARDUS, *De Divinatione et Magicis Præstigiis*, Oppenheim, N. D., folio, 18s. 6d. Reprints of 1611 and 1615 are worth 15s. each.

BOVET (R.), *Pandemonium, or the Devil's Cloyster, being a Further Blow to Modern Sadduceism, proving the Existence of Witches and Spirits,* 12mo; 1684; 10s. This is a rare work.

BOULTON, *A Compleat History of Magic,* London, 1715-6; 2 vols., 12mo; 8s.

CALMET (A.), *The Phantom World, or the Philosophy of Spirits,* 2 vols., 8vo, 1850; 5s.

CAMERARIUS, *De Natura et Effectibus Daemonum.* There is generally found bound up with this a short treatise on sorcerers, entitled "De Veneficis quos olim sortilegiis," Small 8vo, 1675; 7s. 6d.

CAMPANELLA (T.), *De sensu rerum et Magia,* 4to, Francoforte, 1620; 15s.

Another Edition, 4to, 1636, Paris; 15s. This is one of the works written by the author while undergoing his twenty-seven years' imprisonment at Naples, and after being put seven times on the rack. In it he maintains that the earth is a large animal.

CARDAN (Jerome), a famous physician and mathematician. All his writings are tinged with astrology and witchcraft. The best edition of his works is in 10 vols., folio, Lugd., 1663; value about 27 7s. There is no English translation of any of his works.

CASAUBON, *Treatise Proving Spirits and Witches by Prognostic Instances,* 8vo, 1673; 5s. 6d. The same author edited a book for Dr. Dee, entitled "A True and Faithful Relation of what passed for many years between Dr. John Dee and some Spirits," London, 1659, 4to; three guineas is usually demanded by the booksellers for this work, we should value it at 30s.

CHRISTMAS (Henry), *The Cradle of the Twin Giants,* 2 vols., post 8vo, 1849; 7s.

— *Echoes of the Universe,* post 8vo, 1863; 3s. 6d.

FLUDD (Robert), *Opera,* Oppenheim, 1617-38, folio, 6 vols. The collection to be complete should consist of 17 parts, and should be accompanied by the "Tractatus de Rosa Crucis Defendens," 8vo, 1617; value about £15. Isaac D'Israeli, in his "Curiosities of Literature," states that in his time as much as £40 had to be given for a single volume.

GADBURY (J.), *Collection Geniturorum,* small folio, 1662; 10s. Most of the works of this astrologer will be found in the British Museum.

GAFFAREL (J.), *Unheard of Curiosities,* 8vo, 1650; 5s. 6d. A work on Talismans.

— *De Vita Pythagorae,* Rome, 1556, 4to; also Franc., 4to, 1598; Arnol., 4to, 1668. These several editions are of arbitrary price, and it is almost impossible to give any idea of their worth. They might be valued possibly at 2s. each, but the price fluctuates with a variety of circumstances.

JENNINGS (H.), *The Rosicrucians, their Rites and Mysteries,* crown 8vo, 1830; 5s. A very learned and interesting work.

LULLY (Raymond). The works of this author are numerous and treat of Theology, Law, and many other grave subjects, in a style which the author of the "Bibliotheca Britannica" is pleased to call "truly barbarous." The works have been published collectively at Argent., 1598 et 1617, in 8vo; value about 30s.; but, as in other cases, any arbitrary price may be fixed, for if the books only get in the market, they are bought up immediately. As much as £5 5s. is frequently demanded and obtained.

SOCIETIES.

THE PHILADELPHIAN SOCIETY, which it is believed had no fixed location, for fear of persecution. If the society should still exist, it would probably be conducted on similar principles.

THE HOSICRUCIAN SOCIETY.—No fixed places of meeting. Whether this society exists, or ever did exist, is a matter for speculation. The best books on the subject are by JENKINS and ROBERT FLUDDE, which see, &c. There is also a good work entitled "The Rights and Attributes of the True Hosicrucians," by J. VON D —; value 15s.

Booksellers.—Mr. John Wilson, King William-street, Charing Cross; Messrs. Catty & Co., Ave Maria Lane; Mr. Millard, St. Paul's Churchyard. Mr. Wilson publishes once a year, at least, a list of works on Occult Philosophy, and the prices asked are much more reasonable than is usually the case.

Works upon Magic, and the kindred subjects, were in the old days turned out in prodigious numbers. The above list will, however, give a selection of the best treatises. Works on Spiritualism are not referred to, but a list may be obtained from Mr. Burn, Southampton-row, London.

CHAPTER XVI.

WORKS ON SCIENTIFIC SUBJECTS.

Law—General Science.

To give a list of works upon Law would answer no practical purpose, as this science is so specific in its character and limited in its application that but few people, save those whose business it is to study it, would think of spending their money in the collection of works relating thereto.

Still, if only for the purpose of making the list as complete as possible, it may be worth while to enumerate some of the more well-known and standard treatises. It is often said that every man should know something of the law, which he assists in making, and by which he is governed and has to conform to ; and by way of gaining this knowledge it will be found that many people purchase and sometimes read works of general application embracing every phase of the law, and treating it "popularly." A favourite work is "Every Man his own Lawyer," published at the suggestive price of 6s. 8d., and worth about that sum, and in the hands of a skilled lawyer the book is not without its merits. To anyone else, however, it is a source of absolute mischief, for it is impossible to compress in an 8vo volume of whatever thickness even a tithe of the subjects upon which it is necessary to treat. The consequence is that the information afforded is so meagre that a case exactly, or even nearly, in point is seldom to be met with. The reader will probably find something which he considers to be analogous ; but as he knows nothing of the reasons which prompt any particular assertion, it is not surprising that the analogy should utterly fail when brought to a practical test. In other words, he finds that he has tumbled into some pitfall from which the combined efforts of a multitude of lawyers may be insufficient to extricate him, and when the bills of costs of both sides make their appearance the vanquished suitor begins to suspect that he has had a fool for his client.

Anyone who would study the law, or any particular branch of it, must commence at the beginning, and the only available method of doing this is to obtain a firm grasp of the reasons which prompt every assertion made. A man of average intelligence will soon draw fair deductions from the collected premises, and, if he is possessed of property, will at any rate avoid many diffi-

culties that he might otherwise have become involved in. The works given are standard works usually read by beginners, and it must be observed that the latest editions only should be purchased, and for these, of course, the published prices will have to be paid.

The Law of Real Property, that is, the law relating to land, and the different kinds of tenures:

1. WILLIAMS on the "Law of Real Property."

The Law of Personal Property, that is the law relating to goods and chattels:

1. WILLIAMS on the "Law of Personal Property."

The Law of Contracts, or the law which governs agreements respecting property of any kind, popularly called "Commercial Law:"

1. LEAKE on "Contracts."
2. CHITTY on "Contracts."

The reader should also subscribe to the *Law Journal* (No. 5, Quality-court, London), and carefully note up in the margin of his text books the short reports of cases duly reported in that journal as they are decided in the several courts. There are, of course, many other branches of law and numberless works on practice continually being published and re-issued; but, so far as the former are concerned, it will be found for the most part that they are sufficiently treated of in the books already mentioned, while works relating to practice are of no value, save in the hands of persons engaged in following the regular routine of the Courts of Law.

As a rule, old law books are of no value; but this does not apply to the "Reports," collections of which form part of every law library. Some of these are both scarce and valuable, but it will readily be surmised that purchasers are few and far between. In conclusion, the best advice that can be given to dabblers in law is to study it as every other difficult science is studied, by a logical drawing of conclusions from premises, and this can only be done after a careful perusal of standard works on the subject. Any other system will fail, and confusion become worse confounded. To know how to avoid an error is better than to remedy one, however scientifically the process may be accomplished, and the man who has this knowledge is the better lawyer.

A FEW WORKS TREATING UPON GENERAL SCIENCE.

ARISTOTLE, *The Works*, translated and illustrated by THOMAS TAYLOR, 11 vols., royal 4to, 1801-12; value about £30. This is a most valuable translation, and the only one extant in the English language, only fifty copies were printed. The work contains all that Aristotle wrote, and is, of course, essentially scientific.

HOGARTH (William). There are many editions of the works of this celebrated painter, and we think that the following list will be found to include the more important ones:
— A Collection of the Graphic Works of, atlas folio. These collections are very valuable, but as they differ in the quantity of specimens they contain, it is, of course, impossible to fix any definite price.

From this date down to the end of the 17th century great numbers of editions of the New Testament were published. A number of these are, from a pecuniary point of view, absolutely worthless, while others have but little to recommend them, either historically or otherwise. The following list, comprising the date and place of publication, size of volume, and, where practicable, the value, will be found to contain most of the editions possessed of interest. As before, where several values are appended it is to be understood that the work in question has been sold by auction at different times for the sums mentioned.

3. CONCORDANCES, &c.

The first Concordance to the Bible ever printed in English was issued from the press of R. Grafton in 1550. It is a thick small folio, in black letter, and was written by one I. MARBEK. Value, about £4.

The first Concordance to the New Testament printed in English was compiled by THOMAS GIBSON, and issued in 1535.

BRUDER, *Concordantia omnium vocum Novi Testamenti, &c.*, Lipsiae, 4to, 1542; 12s. 6d.
CRUDEN'S *Concordance of the Holy Scriptures*, London, 1766, 4to. This is the third and last edition corrected by the author; it is worth about 20s.

Other Editions as follows: 1737 or 1738, 4to, second edition; 1761, 4to; 1785, 4to; 1794, 4to; 1806, 4to; 1810, 4to; 1812, 4to; 1824, 4to; and others. The edition of 1848, 4to, is worth about the same as the third; the others, perhaps, 4s. 6d. or 5s. each.

Another Edition, royal 8vo, 1844; 20s.

Finally, the reader should observe that, for the most part, volumes of sermons, exhortations, and the like are absolutely of no value at all. There are, of course, exceptions to this rule; for instance, the Sermons of John Knox, the Scottish Reformer, are, and always were, scarce and valuable, because they are associated with a great religious revolution of which Knox was the centre—a reason in itself for making his works, whether sermons or otherwise, acceptable to most of those who take an interest in matters connected with history.

BYRON (Lord). The first editions of Lord Byron's works were published separately between the years 1816-24, comprising 13 vols. in 8vo. DICKENS (Chas.). The works of this author have been reprinted in every shape and form. The first editions of the larger novels are valuable, being worth about 12s. to 15s. a volume all round.

In booksellers' catalogues it is a common occurrence to find the original numbers in which most of his works were issued quoted at most extortionate prices, £5, and even more being asked in some instances.

The work entitled *Sunday under Three Heads*, 1836, is in the original very valuable. This work sells, when met with, at about £8 8s. Some of the author's earlier pieces are also very scarce.

A large number of other editions, the best of which appear to be: Edinburgh, 1614, 12mo, £5; 1634, 12mo, £5. The Edinburgh editions are the best, but all the earlier impressions of Sir DAVID LYNDSDAY'S works are valuable.

MACCAULEY (Lord). *Loys of Ancient Rome*, London, 8vo, 1842, 5s.; 1847, small 4to, 12s.; 1848 (and frequently since), foolscap 8vo, 2s. 6d.; 1860, foolscap 8vo, 2s. 6d.; 1874, small 4to, 30s. — *Essays*, London, 1843, 3 vols.; £1.

MACHIAVELLI (N.). *The Works of*, London, 3 vols., 4to, 1752; £2 5s.

MARLOWE (O.). *The Works of*, London, 3 vols., post 8vo, 1826; 22s. 6d.

Another Edition, 3 vols., 8vo, 1850. Large paper, twelve printed.

The author issued, between 1564 and the time of his death, in 1593, a number of Plays and Tragedies, some of which are of the greatest rarity. His works are, however, almost forgotten.

MASSINGER (Philip). Another old writer, whose works may be said to be in a gradual state of decay. The best editions are: London, 1759, 4 vols., 8vo, 20s.; London, 1761, 4 vols., 8vo, 17s.; London, 1779, 4 vols., 8vo, £1 3s. 6d.; London, 1813, 4 vols., 8vo, £3; large paper, £5 (the best edition, but not perceptibly different from the previous one of 1805, which is worth almost as much).

In 1830 an edition of his Plays, called the "Castrated Edition," London, 12mo, 3 vols.; was foisted on the market. The "Castrations" have converted the book into an entirely new publication, and a very bad one it is. Value in money, about 4s.; in utility, nothing at all. The first editions of MASSINGER'S Plays, separately published, though scarce, are not valuable.

MILTON (John). *Paradise Lost*.

First Edition, 4to, 1667-1669. There are no less than eight variations of this edition, and each is distinguishable by means of the title page.

MILTON (John), *Paradise Lost* (continued):
The first variation has a title page with the author's name in italic capitals, and the poem follows the title page immediately; value, £5 5s.

The second variation has the name JOHN MILTON on the title page, much smaller than the first; value, £5 5s.

The third variation has the author's initials only J. M.; value, £2 2s.

The fourth variation has a fleur-de-lis ornament of four lines under the author's name, and immediately after the title are prefixed, for the first time, seven preliminary leaves; £4.

Fifth variation, printed by Sammon, 4to, in 1668. There are three stars, thus, . . . before and after the author's name; £3 3s.

Sixth variation, the same as the fifth, excepting that there are no stars on the title page; £3 3s.

The seventh variation has the date at the foot of the page, in the centre, instead of at the end of the previous line; £4 4s.

Eighth variation, the word Angel on the title page is in italic, and there is a comma instead of a full stop after the word Brittan; £3 3s.

As the value of first editions of English writers is steadily rising, the reader should buy at the above values, or near it, if possible.

— *Paradise Regained*, usually found bound up with "Samson Agonistes" and some of the smaller poems.

The author, of course, published most of his works in a separate form. A good edition of *Lalla Rookh* was issued in 1817, 4vo, with plates by WESTALL, £3 3s.; and again in 1846 in royal 8vo, with illustrations by KENNY MEADOWS and CORBOULD, 22s.

A magnificent edition of SHAKESPEARE was published in 1853-55 by Halliwell consisting of 16 vols., folio. It is worth about £45 or £50, or with proofs on India paper, about £70 or £80. A good "Catalogue of all the Books, Pamphlets, &c., relating to Shakespeare, together with an account of the early 4to," will be found in Wilson's book bearing that title and published in 1827. It can be bought for about 4s. 6d.

SHENSTONE, Works of, 1764-9, 3 vols., 8vo; 17s. Other Editions:

1765-9 3 vols., 8vo.
 1768. 2 vols., 12mo.
 1773. 3 vols., small 8vo; 10s.
 1773. Edinburgh, 1773, 2 vols., 18mo.
 1777. 3 vols., small 8vo; 8s.
 1796. 3 vols., 12mo.

It will be observed, therefore, that there is nothing about any of Shenstone's works calculated to increase their value. This remark does not, however, apply to *Poems upon Various Occasions*, Oxford, 1737, small 8vo, a pamphlet of 78 pages, which is worth about £3 3s., and has sold for as much as £15. SHENSTONE re-called and destroyed as many copies as he could of this work, hence its value.

Dean SWIFT published a vast number of works. Some of the earlier editions are valuable.

TAYLOR (John), the Water Poet. The first edition of the works of this author was published in 1630, in folio; a copy is worth about

£10. The Water Poet also wrote a dissertation entitled "The Olde, Old, very Olde Man, or the Age and Long Life of Thomas Parr," London, 1634, 4to, 16 leaves, with a portrait of Old Parr sitting in a chair; value about £5 1s. John Taylor seems to have been an impudent pretender, and his works are in no repute. This, however, by no means prevents them from being valuable, and some of his earlier doggerel rhymes are worth a considerable sum.

TENNYSON (Alfred), 8vo, Moxon, 1861; 10s. 1871, 11 vols., 18mo: £2. There are many recent editions of this author's works.

THACKERAY (W. M.), the *Edition de Luxe*, 1878-9, 24 vols., imperial 8vo: £30. The best Library Edition is that of 1867-9, in 22 vols. 8vo: £10.

The original editions of THACKERAY's larger works are, on the average, worth 12s. a volume. According to this computation *The Virginians*, in 2 vols., 8vo, 1858, would be worth about £1 4s.; *Henry Esmond*, 3 vols., post 8vo, 1861, £1 16s., and so on of the others.

THOMSON (James), *The Seasons*. The best edition was published at Parma in 1794, royal 4to; valued at about £3 3s. Another good edition, London, 1797, imperial folio; about £5, plates by BARTOLOZZI. Also London, 1842, 12mo: 17s. 6d. A large number of editions are very bad, and, in point of fact, very few beyond the large paper copies are of any material value.

WATT (Robert), *Bibliotheca Britannica*, Edinb., 1824, 4 vols., 4to; £4.

WORDSWORTH (William), *Poetical Works*.

1820. 4 vols., 12mo: 22s.
 1827. 5 vols., 12mo: £1 3s. 6d.
 1836. 6 vols., 12mo: £30s.
 Also 1840 and 1846, in 7 vols., 12mo; 20s. each.
 1849. 7 vols., 18mo: 12s.
 1857. 6 vols., 8vo: 12s.

The first edition was published in 2 vols., 12mo, 1807, and is worth about £2 2s.

YOUNG (Edward), *Night Thoughts*. The first edition was published in 1742, in 4to, and is worth about 18s. The edition of 1797, folio, designs by BLAKE, is considered good, and worth about £2 5s. Some copies have coloured plates. Other Editions:

London, 1799. 8vo, plates; 12s. 6d. " 1800. 2 vols., 8vo; 10s. " 1801. 2 vols., 12mo. " 1802. 8vo. " 1812. 8vo. " 1813. 8vo. " 1817. 12mo. " 1830. 24mo. " 1831. 18mo. " 1843. 8vo. " 1853. 12mo. " 1859. 32mo.	These editions are worth from 5s. 10s. each.

We have now given examples of some of the best works in almost every department of literature; and in order to make the Manual as complete as possible, a list of the principal English Literary Societies and Private Presses is appended, together with the names of several Booksellers, both in London and elsewhere, in whom the greatest reliance can be placed in all matters relating to books and their value.

CHAPTER XXIX.

LITERARY SOCIETIES AND CLUBS.

ABBOTSFORD CLUB, instituted at Edinburgh, 1835, limited to fifty members. The works issued by the club are all in 4to, and consist of 33 vols.; present value from 10s. to £2 2s. each. The publications of the club are discontinued.

The society is now dissolved.

HANSARD KNOLLYS' SOCIETY, for the Publication of the Works of Early English and other Baptist writers, instituted in London

in 1845, and dissolved in 1851. The books issued by the society are nine, published in 10 vols.; value about £1 10s.

LAW AMENDMENT SOCIETY, instituted in London, 1847. The society issues from time to time books at 6d. each, suggesting improvements in various branches of law. A complete set would be worth in money, perhaps, 7s. 6d.; in utility, nothing, except to persons taking an interest in obsolete systems of law.

LEEDS PHILOSOPHICAL AND LITERARY SOCIETY, instituted 1818. The author believes that this society is still in existence.

MAITLAND CLUB, instituted in Glasgow, 1828. General Literature, dissolved in 1849. 60 vols., mostly in 4to, and 1 vol. of MSS., consisting of autographs of members of the club, with notices of contributions, now in the British Museum (A.C. 8253, '79).

PHILOLOGICAL SOCIETY OF LONDON. The *Transactions* of the society, 1864 to 1857, 4 vols., 8vo, are worth about 5s. a volume; 1858-59, in parts, published at 4s. 6d. each, from 1860 to 6d. each, two parts annually. The *Proceedings* are complete in 6 vols., 1842-53;

value £3, published at £12 12s. There are also certain extra publications of the society, consisting, *inter alia*, of BARNES' *Grammar and Glossary of the Dorset Dialect*, 1868; SKRAT'S *Mæso-Gothic Glossary*, 1868, and the like.

PURE LITERATURE SOCIETY, instituted 1854. This society issues no works of its own, but supplies those recommended in its catalogue.

ROXBURGH CLUB, instituted in London in 1812 for Reprinting Ancient Tracts and Works of General Interest. A complete set of the published works is very valuable; the volumes are, however, more often met with separately. The following is a short list of some of the more important publications:

Certaine Bokes of Virgile's Aeneis Turned into English Meter, by the EARL OF SURREY, 1814, sixty copies printed; 20s.

These *Philosophical Transactions* were abridged by LOWTHORP, First Edition, London, 1705; Fourth Edition, 1731; 4to, 3 vols., plates. Other abridgments by JONES, MOTTE, EAMES, and MARTIN. The whole series will generally be found in from 11 to 13 vols., exclusive of MOTTE's abridgment, which, being duplicate, is not considered as forming part of the series.

CHAPTER XXX.

PRIVATE PRESSES.

THE AUCHINLECK PRESS was founded at Auchinleck House in Dumfriesshire, the seat of Sir Alexander Boswell, the son of James Boswell, the biographer of Dr. Johnson. The first work printed by Sir Alexander was entitled the *Tyrant's Fall*, 1816, 8vo, and consists of a pamphlet of five pages. The *Fronde Caduce* was reprinted in 1816, 1817, and 1818, all in 4to. This Press had only a short life of three years, 1816-18.

HELDORNLIE PRESS, established at Beldornie Tower in the Isle of Wight, by Edward Uterson, in 1840. Sixteen works issued from the press, which ceased to exist in 1843.

THE DARLINGTON PRESS, established by George Allen in or about the year 1780. The productions of this press are of an exceedingly miscellaneous character, consisting of ballads, election squibs, inscriptions on monuments, legal documents, notices to people trespassing on Mr. Allen's grounds, and even a single sheet, in 4to, on the dimensions and weight of a fat ox bred near Darlington. A tract, entitled *Of the Patagonians*, is, however, scarce; 1788. Darlington, 4to, £2. The principal productions are topographical, and some of these are both useful, interesting, and valuable.

There is a description of book to which reference has been made more than once in the course of the preceding pages, viz., "a book privately printed." This term, although inclusive of works printed at a private press, such as the Strawberry Hill Press, is not limited in its application to any considerations of a private nature so far as the press itself is concerned. It is obvious that an author may, if he thinks fit, employ a professional printer to set up the type for him at his (the printer's) own place of business, and such printer may, and, of course, will, proceed according to the instructions he has received. In this event the production is none the less a "privately printed" book, always assuming that the author, instead of publishing it to the world at large in the ordinary way, should limit the circulation to his own "private" acquaintance or to a specific number of subscribers. Examples of works thus privately printed are common enough; for instance, J. PAYNE COLLIER's series of "Illustrations of Early English Popular Literature," 1862-63; the same author's series of "Old English Literature," small 4to, 1864. All Halliwell's reprints are privately printed, and so are Maidment's publications.

LEE PRIORY PRESS. This famous printing establishment was instituted by Sir Egerton Brydges, at Ickham, near Canterbury, in the year 1813. From this date to 1822 the proprietor printed fifty-two works and some 110 single leaves; but in no instance were more than 100 copies of each struck off, and in most cases a very much less number.

THE MIDDLE HILL PRESS, established at the seat of Sir Thomas Phillips in Worcestershire in the year 1819, turned out an immense quantity of pamphlets and single leaves. The principal subjects treated of are genealogical, heraldic, and antiquarian literature.

THE STRAWBERRY HILL PRESS, perhaps the most famous of any, was founded by Horace Walpole at his house at Twickenham. The first work printed is entitled *Two Odes to Mr. Gray*, 4to, 1757, and the last, *Bishop Bonner's Ghost*, 4to, 1789. There are many detached pieces in folio, 4to, 8vo, and *infra*, of which a careful record is kept. A complete list will be found in LOWNDES' "Bibliographer's Manual," ed. 1862, page 237, Appendix.

WHY DOES HAIR FALL OFF?

From many causes. Sometimes from local disturbing agencies, such as sickness; sometimes from neglect in cleansing; but more frequently from decay in the saps and tissues which supply each individual hair. In such case,

OLDRIDGE'S BALM OF COLUMBIA

Is an excellent corrective of the many insidious sources of decay which ruin nature's chief ornament.

It stimulates, strengthens, and increases the growth of Hair; softens and nourishes it when grown; and arrests its decline. Besides this, it acts on those pigments the constant supply of which is essential to the Hair retaining its colour.

The Hair of the Head and the Whiskers and Moustachios

Are alike benefited. For children it is invaluable, as it forms the basis of a magnificent Head of Hair, prevents Baldness in mature age, and obviates the use of dyes and poisonous restoratives.

HOW TO MAKE SHAVING A PLEASURE!

1st.—Send 15 stamps for Edward Smith's Wonderful SHILLING HOLLOW-GROUND RAZOR. Is the marvel of the day; it never wants grinding or setting. These razors have stood every test, many thousands having been sold since they were first introduced two years ago. N.B.—Any razor not giving satisfaction will be exchanged.

2nd.—Send 2s. 9d. stamps for Edward Smith's GRADUATING RAZOR STROP. It is the best for sharpening razors ever introduced. By means of a screw it graduates its elasticity, making it more or less elastic at pleasure. Its elasticity will prove invaluable to the unskillful operator, as it will prevent his inadvertently bearing too hard upon the razor and injuring its edge, at the same time enabling him to keep his razor in perfect order.

3rd.—Send 7 stamps for Edward Smith's DIAMOND RAZOR PASTE, for use with the "Graduating" Razor Strop, or any other. Should never be without it, for by its use a strop will last ten times as long, and sharpen a razor twenty times as well.

Lastly.—Send 7 stamps for Edward Smith's MAGIC SHAVING STICK. Makes the finest stiff lather, and is the best shaving soap ever invented.

The above four articles will be sent, post free, for 4s. 9d.

SPRATTS PATENT

Meat "Fibrine" Vegetable DOG CAKES

(WITH BEETROOT).

THE LATEST IMPROVEMENT.

USED IN THE ROYAL KENNELS.

Royal Kennels, Ascot, April 2, 1882.

Dear Sirs,—Your Meat Biscuits containing Beetroot are not to be equalled.—FRANK GOODALL.

These Biscuits, made according to our Improved Patent, contain Beetroot as vegetable matter in addition to the other highly nutritious ingredients used in the manufacture of our Patent Meat "Fibrine" Dog Cakes, which, for the last twenty years, have had such a world-wide reputation.

The NUTRIENT and ANTI-SCORBUTIC properties of Beetroot are unrivalled, and it is the only vegetable that retains its virtues unimpaired under the great heat required in biscuit baking.

BEWARE OF WORTHLESS IMITATIONS!!!

Made of unsound and cheap ingredients, thus enabling the makers to sell them to the trade at a low price, so that the dealers get a better profit than by selling ours. These imitations are supplied by some tradesmen even when asked for ours, and for the protection of honest traders we shall feel obliged if our customers will kindly notify us whenever these frauds are perpetrated on them.

*Please see that every Cake is stamped "Spratts Patent"
and a "X."*

ROWLAND'S TOILET ARTICLES,

20, HATTON GARDEN, LONDON.

ROWLAND'S ODONTO

Or PEARL DENTIFRICE is of inestimable value in preserving and beautifying the teeth, strengthening the gums, and giving a pleasant fragrance to the breath ; it eradicates tartar from the teeth, prevents and arrests decay, and polishes and preserves the enamel, to which it imparts a pearl-like whiteness. Its unprecedented success for more than half a century shows the universal favour in which it is held, while the fact of its being entirely free from any acid or mineral ingredients constitutes it the safest and purest tooth powder ever used. To prevent fraud the genuine Odonto has a 3d. Government stamp on the box. Ask for Rowland's Odonto.

ROWLAND'S MACASSAR OIL

Is universally in high repute for its unprecedented success during the last 30 years in promoting the growth, restoring, improving, and beautifying the human hair. It prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from surf and dandriff, and makes it beautifully soft, pliable, and glossy. For children it is especially recommended, as forming the basis of a beautiful head of hair, while its introduction into the nursery of Royalty is a sufficient proof of its merits. Sold in usual four sizes.

ROWLAND'S KALYDOR,

An Eastern botanical preparation, perfectly free from all mineral or metallic admixture. It is distinguished for its extremely bland, purifying, and soothing effects on the skin ; while by its action on the pores and minute secretory vessels, it promotes a healthy tone, allays every tendency to inflammation, and thus effectually dissipates all redness, tan, pimples, spots, freckles, discolourations, and other cutaneous visitations. The radiant bloom it imparts to the cheek, the softness and delicacy which it induces of the hands and arms, its capability of soothing irritation, and removing cutaneous defects, render it indispensable to every toilet. Gentlemen after shaving will find it renders the skin soft, smooth, and pleasant. Of all Chemists, at 4s. 6d. Avoid cheap spurious imitations. Sold by all dealers in perfumery.

GREY HAIR

Rather than attempt to Restore it.

- 1st.—Because the old fashioned and objectionable Hair Dyes dry up and spoil the Hair.
- 2nd.—Because the majority of "Hair Restorers" bring the users into ridicule by producing only a sickly yellow tint or dirty greenish stain, instead of a proper colour.

The following Testimonials (of many hundreds received) declare the value of

LATREILLE'S HYPERION HAIR RESTORER.

As positively restoring grey or white hair to the **REALLY NATURAL** colour, gloss, softness, luxuriance, and beauty of youth; it so perfectly accomplished its work and fulfils its promise, that in brilliant sun-shine, or under glaring gas-light, the user can alike defy detection in ever having been grey, or used a remedy, while as a nourisher and strengthener of weak hair it has no equal.

Price 3s. 6d., sent in return for Stamps or Post Office Order, by the Proprietors,
LATREILLE & CO., Walworth, London, or may be had of Chemists;

But it is strongly advised that anything else, offered from interested motives, be resolutely refused, as Latreille's Hyperion NEVER DISAPPOINTS. All Chemists can readily procure through wholesale houses, if they have it not themselves in stock.

SPECIMEN TESTIMONIALS.

20, Royal George-street, Stockport,

February 26, 1870.

DEAR SIR.—My hair went white through trouble and sickness, but one bottle of your Hyperion Hair Restorer brought it back to a splendid brown, as nice as it was in my young days. I am now forty years old, and all my friends wonder to see me restored from white to brown. You can make what use you like of this. Yours truly,

(Mrs.) MARY WORTHINGTON.

High-street, Corsham, Wilts,

DEAR SIR.—I enclose stamps for another bottle of your Hyperion Hair Restorer; its clean qualities are sufficient to recommend it anywhere.

Yours respectfully, E. MAYNARD.

St. Heliers, Jersey,

SIR.—Please send me another bottle of your Hyperion Hair Restorer; I bear willing testimony to its being very pleasant to use, both as to cleanliness and absence of disagreeable smell.

Yours truly, F. DE LUSIGNAN.

July 15, 1873.

DEAR SIR.—I am most happy to tell you that I have reason to command your excellent Hyperion Hair Restorer, as it has already turned the grey hair of a person fifty-seven years old to its natural colour.

Yours respectfully,

T. WHITMORE.

83, Dewsbury-road, Leeds,

May 23, 1873.

DEAR SIR.—I want half-a-dozen more bottles of your Hyperion Hair Restorer, some for friends and the remainder for myself; it is the best restorer of grey hair to its natural colour.

Yours truly, JAMES DAWSON.

132, High-street, Stourbridge, May 16, 1878.
SIR.—I find your Hyperion Hair Restorer is a first-class and really genuine article, and is well worth the money. After using it thrice my hair began to turn the natural colour whereas before it was quite grey; it also keeps the hair from falling off, and I shall always recommend it to every one I know. You are at liberty to publish this if you choose.

Yours truly, (Mrs.) M. DAVIS.

Thirsk, Yorks, January 26, 1876.

DEAR SIR.—I use your Hyperion Hair Restorer, and find it everything which has been said in its favour. I am, dear Sir, yours truly, T. COATES.

Porchester, near Fareham, Hants, Oct. 16, 1875.

SIR.—Please send me another bottle of your Hyperion Hair Restorer; it is better than any other restorer I have tried. Yours faithfully,

(Mrs.) C. CHRISTIE.
